PROJECT TYPE

Hospitality

LOCATION

Nairobi, Kenya

YEAR

Completed in 2017

PLANNING designed the new Four Point Sheraton Hotel at its strategically located 1 acre site at the entrance to the Jomo Kenyatta International Airport, Nairobi, Kenya. The main objective of the design was to provide a convenient and iconic yet cost effective hospitality solution. PLANNING's approach was to develop a highly efficient hotel that utilized the site to its full economic potential. This saw a design response suggesting 145 rooms for overnight guests, with the bulk of the back of house service placed at basement level. This maximizes opportunities for a café-style lounge, sports bar, destination dining area and meeting spaces. It will keep a height of 5 floors. Furthermore, the spa and fitness facilities located at the top floor were set to ensure direct access to the roof terrace featuring a pool, lounge and bar with uninterrupted views to the national park. Coupled with the hotel shuttle service and the full size basement offering long term secure parking, this hotel invites passengers to enjoy the hotel facilities as a secondary airport waiting lounge. Overall, the massing and façade treatment aspires to achieve an elegant, contemporary and impressive presence both when approaching and leaving the airport.
