SERVICES PROVIDED

Architects

PROJECT TYPE

Masterplanning / Residential

LOCATION

Msambweni, Kenya

YEAR

2009

STATUS

Design Proposal

A development of close to 1300 residential units in Kongowea, Mombasa County.

The development is designed to create a symbiotic relationship with the nearby Kongowea Market and surrounding residential and commercial areas, with pedestrian traffic from the neighbourhood being allowed to pass through the development. 7-meter-wide pedestrian thoroughfares flanked by commercial units link the site to the surrounding neighbourhood.

Affordability, efficiency, and use of technology are major factors. The Village is designed to encourage non-motorized transport, with parking areas being confined to the outer edges of the development. PLANNING has executed the master plan and part of the Concept Design Stage.
